

LETTER TO THE EDITOR

(Birdem Med J 2013; 3(1): 61)

Letter to editor

I have gone through your journal (VOL 2 NO 2, 2012)

The get up was impressive. The format and over all design is nice. The CT scan film in Medical quiz: images (page no 130.) was shown in reverse way. The articles were predominantly with Diabetes .It ,I expect should have wide range of subject to make the journal acceptable. I hope you would come out of this.

Professor of Neurology

Dhaka Medical College

Editor's view and response

Thank you for your inspiring views about our journal. I remain grateful for your comment about the journal.

As we have repeatedly told our journal is a peer reviewed journal. Our aim is to make it a collections of different articles of all disciplines of medical and allied sciences. It publishes CME articles, articles of researchers of different disciplines of BIRDEM and other institutes of home and abroad.

In the said issue we have 4 original articles. only one was on topics not related to Diabetes mellitus. None of the 3 review articles were related to Diabetes Mellitus. Only one of the 4 case report was with diabetic patients. Reality is publication of article depend on availability of quality articles also. We are new, just got ISN, have recently been introduced to BaglaJol and others. We have applied for BMDC registration. Needless to say, all thses are needed for a class journal with quality articles. We hope with all your help we shall progress and reach to our dream of a quality journal with best articles. Thanking you again.

Prof. Khwaja Nazim Uddin

Executive editor
