A 61-year-old man, diagnosed with type 2 diabetes mellitus, presented with a 3-month history of fever and weight loss. He had neutrophilic leucocytosis, a normal chest radiograph and Mantoux test (MT) revealed a 5 mm induration at 72 hours. Abdominal computed tomography (CT) scan axial film is shown (Figure 1) below.

**Answer the following questions.**

**Question 1.** Mention two abnormal radiological findings.

**Question 2.** Mention three differentials.

**Question 3.** Mention one test that may establish the aetiological diagnosis.
