BJOG yearly CME program

Name of the article:

For Postpartum Haemorrhage Prophylaxis between Carbetocin and Oxytocin - A Study in Tertiary Care Hospital

Page no (05)

- Q. Following statements are true or false?
- a) Carbetocin is a long-acting synthetic octapeptide analogue of oxytocin with agonist properties.
- b) Intravenous injections of carbetocin produce tetanic uterine contractions within two minutes.
- In the above mentioned study all patients had contracted uterine tone within 5 min when given carbetocin.
- This study showed that the need for additional uterotonic was significantly more in oxytocin group.

Name of the article:

Psychological impact of COVID 19 pandemic on pregnant mothers – a survey during the early days in Bangladesh

Page no (14)

Following statements are true or false for the COVID-19 pandemic pregnant mothers based on the study findings

- Almost half of the study population felt uneasy on watching news or any stories regarding COVID 19 on social media.
- b) Of the responders, 23.5% reported panic attacks and a fear of dying.
- Obstetric complications were primarily limited to fetal distress, reduced fetal movement, abdominal pain, and heaviness, GDM, UTI and PROM.
- Majority of the respondents remain unsatisfied with treatment of Telemedicine service.

Name of the article:

Pre-caesarean Anxiety in Obstetric Patients Undergoing Elective and Emergency Cesarean Section: A Comparative Study

Page no (20)

Following statements are true or false (based on study findings)

- World Health Organization (WHO) recommended the optimal caesarean section rate should be between 5% and 15%.
- b) Preoperative anxiety is a challenging concept in the preoperative care of patients.
- c) Trait anxiety is a temporary emotional state.
- d) In this study pre-caesarean anxiety was found more in cases of elective cesarean section compared to emergency cesarean section.

Nme of the article:

Analysis of Deliveries Using Robson's 10-Group Classification at a semi-urban hospital.

Page no (27)

Following statements are true or false (based on study findings)

- a) It is well-established that caesarean section (CS) rates have risen more in developing world and decreasing in developed world over the past three decades.
- The Robson classification system provides clinically relevant categories for analyzing and reporting rates of CS.
- c) The results of the study, showed that majority of the total CS rate was contributed by Robson Group 5.
- The Robson 10-group Caesarean section classification system is a complicated and so underutilized.

Name of the article:

Anatomical and Functional Results of Modified Mccall Culdoplasty Done During Vaginal Hysterectomy in A District Hospital of Bangladesh Page no (35)

Following statements are true or false (based on study findings)

- a) The aim of first surgery for uterovaginal prolapse should be to restore the normal anatomy i.e. a normal vaginal length should be maintained with its axis directed towards S3 –S4.
- One fourth of the uterine vault & enterocele following surgery results from middle compartment defect.

- Post hysterectomy vault prolapse (PHVP) may develop as a result of an enterocele that was overlooked during surgery.
- d) In this study following McCall culdoplasty the main complication was profound dyspareunia.
