# BJOG yearly CME program

Name of the article: Editorial

The E MOTIVE trial game changer for post partum haemorrhage management focusing on early detection and timely intervention

Page no. (61)

- 1. Q. Following statements are true or false?
- a. In E Motive trial ,Here E means Early intervention and trigger criteria
- b. In E Motive trial Inj oxytocin 10 unit in 100-200ml infusion to be given over 30 min.
- Escalation of care should be given if bleeding continues.
- Intravenous colloid fluids should be used if clinically indicated for resuscitation.

#### Name of the article:

Innovation of a calibrated Drape for quantative measurement of blood loss during and immediate after vaginal delivery

Page no. (65)

- 2. Q. Following statements are true or false?
- Calibrated drape can be decontaminated with saylon.
- b. Using of calibrated drape can accurately measure blood loss after vaginal delivery.
- c. Women with excessive bleeding ,drape to be kept for 2hours.
- d. Drape to be kept for half an hour for all women who had vaginal delivery.

### Name of the article:

Effect of pretreatment with co enzyme Q10 & DHEA before ART in patients with diminished ovarian reserve

Page no. (74)

- 3. Q. Following statements are true or false?
- In this study Co enzQ10 & DHEA given 60days prior to IVF.

- Co enzyme Q10 supplementation in women undergoing IVF resultted in reduced rate of aneuploidy.
- c. Co enzyme Q 10 can mitigate the negative effects of oxidative stress.
- d. Co enzyme Q 10 can be used for ovulation induction as well.

# Name of the article:

Red blood cell indices as a primary tool for carrier screening of thalassemia and E disease in pregnancy

Page no. (81)

- 4. Q. Following statements are true or false
- First screening method of thalassemia should be Red cell indices.
- b. Hb E trait on Hb-electrophoresis is diagnosed when only Hb A2 level rises.
- c In this study best cut off value of MCV for detection of defective Hb was 75.1fl.
- d. In this study MCH was found more sensitive than MCV for detection of defective Hb.

#### Name of the article:

Effect of estradiol valarate on Endometrial thickness in Infertile polycystic ovarian syndrome patient - A comparative study in tertiary level hospital Page no. (91)

- 5. Q. Following statements are true or false?
- a. Minimum Endometrium thickness needed for implantation is 5mm.
- b. In this study in infertile cases TVS was done for assessment of follicular growth ,endometrial thickness, endometrial pattern and zone of vascularity on day 8/9 of the cycle.
- c. In this study, endometrial thickness was measured from outer margin of anterior layers to the outer margin of the posterior layer of endometrium in the saggital uterine plan.
- Endometrial thickness achieved with letrozole, estradiol valarate combination was significantly low than with letrozole alone.

Name of the article:

Pregnency with pre existing Heart diseaseanalysis of 50 cases

Page no. (98)

- 6. Q. Following statements are true or false.
- Heart disease in pregnancy increase the four fold risk of thrombosis.
- In this study most cases were NYHA class 1 and in this group feto maternal outcome was good.
- c. In this study most of the patients were aged and were > 35 years.
- In this study, Heart disease in pregnancy increases the rate of pre mature birth of the babies.

#### Name of the article:

Vit D in women with Primary infertility in a tertiary care centre in the southeast region of Bangladesh Page no. (104)

- 7. Q. Following statements are true or false?
- In this study Vit D levelwas measured via Chemiluminescent Microparticle immunoassay.
- b. Studies shown that Vit D deficiency are rare among infertile women.
- c. In this study 70% of the women were severely deficient of Vit D (F)d. Endocrine society guidelines suggest that value of severe Vit D insufficiency is < 10ng/ml.</p>

# Name of the article:

Challenges and threats of over the counter dispensing of medical termination of pregnancy pills: A review

Page no. (111)

- 8. Q. Following statements are true or false?
- a. Unregulated and nonprescription usage of the Medical regulation with menstruation (MRM) pills is a serious concern.

- b. Medical regulation with menstruation is a revolutionary advancement towards reducing unsafe abortion.
- c. Abortion is legal in Bangladesh.
- d. Studies show that there is lower risk of sepsis even with self-administration of oral pills.

Name of the article:

Migration of Cu-T 380A - a case report Page no. (117)

- 9. Q. Following statements are true or false
- IUCD migration has a great impact on patient's physical health.
- b. Endoscopic approach are the best for removal of migrated IUCD.
- c. Missing Cu T 380 A can be diagnosed by MRI.
- d. Uterine perforation following IUCD is common.

#### Name of Article:

Para vaginal Dermoid cyst: A Diagnostic Dilemma Page no. (120)

- 10. Q. Following statements are true or false?
- a. Dermoid cyst of ovary most commonly occur in elderly age group.
- b. Abdominal ultrasound remains gold standard as a diagnotic tool.
- c. Para vaginal dermoid cyst is a rare condition.
- d. Transabdominal excision under anaesthesia remains treatment modality of choise.
