

## BOOK REVIEW

### LECTURES ON CARDIOVASCULAR SYSTEM

AUTHOR: PROFESSOR ABDULLAH AL SHAFI MAJUMDER'

The recently published book titled "Lectures on Cardiovascular System" is a collection of scientific presentations delivered by Professor Abdullah Al Shafi Majumder, Professor of Cardiology, National Institute of Cardiovascular Diseases. A total of eight presentations are included. Of these 5 are on mitral stenosis and percutaneous mitral commissurotomy; 3 on percutaneous procedures (PCI in multivessel disease; small coronary vessel stenting; percutaneous heart valve procedures). One presentation is on new parameter for assessing diastolic dysfunction of LV and another on cardiovascular imaging in geriatric population.

The author compiled his lectures in the chronological order according to the dates of presentations - not on topic wise. For a reader, collection of lectures on topic would have been more acceptable for reference. We appreciate the novel approach by the author, as so far no such attempt to compile the lectures / presentations has been made in the field of medical science. His initiative may inspire others to come forward for such effort and that will enrich our academic activities.

It is heartening to know from the book that Professor Majumder presented his lectures as Faculty in so many countries that include USA, Russia, Italy, Greece, Morocco, India and Iran. We welcome the endeavor by Professor Majumder and hope he will author more books on his subject.
